MADE IN CANADA

RZRBACK

AVAILABLE REMOVABLE FULL BRIM

CSA-CERTIFIED PROTECTION THAT ADAPTS TO THE JOB

Jobsites never stay the same, so why should your safety helmet? Introducing RZRBack™, revolutionary head protection that's proudly designed and manufactured in Canada.

RZRBack™ brings unmatched adaptability with a unique 2-in-1 shell design that effortlessly converts from a climbing style helmet to full brim in just a few clicks.

Available with dual-venting, lightweight ergonomic comfort, optional Quin medical ID tag, and the Mips® brain protection system, RZRBack™ sets a new standard in safety.

PROUDLY DESIGNED
AND MANUFACTURED
IN CANADA

INDUSTRY-FIRST REMOVABLE FULL BRIM

RZRBack™ offers unmatched adaptability thanks to first-to-market 2-in-1 removable brim accessories, that easily attach in just a few clicks. These are just a few of the full range of accessories sold separately, that provide enhanced adaptability to any jobsite.

LIGHTWEIGHT COMFORT + DUAL-VENTED AIRFLOW

The lightweight 500-gram PC/ABS shell delivers serious protection without weighing you down. And it combines internal airflow channels with an available dual-venting design, to help keep you cool when the pressure's on.

INTRODUCING MIPS® AND QUIN

Available for the first time on a CSA-certified safety helmet, MIPS® technology helps reduce rotational brain forces through a 10-15 mm low-friction slip layer, while the built-in Quin tag gives first responders fast access to critical medical info with a simple phone tap.

MIPS® BRAIN
PROTECTION SYSTEM

INTRODUCING MIPS®

Available for the First Time on a CSA Certified Safety Helmet

Injury statistics demonstrate that nearly 60% of head injuries are caused by fall accidents from higher levels or falls on the same level. These types of falls are much more likely to result in angled impacts, instead of directly to the top of the head. Science has shown that our brains are very sensitive to rotational forces resulting from these angled impacts.

The MIPS® system consists of a low friction inner layer that allows for 10-15 mm of relative movement between the helmet and the head during the critical first 5-10ms of impact, decreasing the amount of rotational force transferred to the brain by redirecting said forces. The result is a reduction in the severity of head injuries.

QUIN TAG

Not Just an NFC

Available Quin Tag technology enables you to digitally store critical medical ID and essential info. In an emergency, first responders can access this info by tapping their smart device to the tag, automatically notifying the users' chosen emergency contacts and services.
